

Child and Family Centre

Toddler Time

12 - 35 months

Children learn through language and supplementing these learning experiences with activities that involve the senses is an important and beneficial part of their ongoing growth and development.

This program explores a wide range of activities that will support your child's learning. These may include playing with colour paddles, smelly jars, balance beams, mystery bags, musical instruments and a bean bag toss.

Parents and caregivers will be encouraged to engage in back and forth exchanges with their children to support them in developing valuable communication skills. As with all of our programs, learning through play is our intentional focus and the motive behind the activities and experiences of each and every session.
